

the BJORN DragonFlight™

”to make your arrows fly safer”

An arrow, passing the bow after the release, does sometimes touch the arrow rest, or the sight window. Any such interference, gives the arrow a deviation in its flight.

The BJORN DragonFlight/BDF™, features a new, innovative, **patented** concept of arrow fletching. The BDF-vanes are segmented into digits, forming elastic peaks/”wings” with cut-outs/”vallies” between the wings, following the base of the vane.

The design and *patented BDF-construction, with ”wings & vallies”, gives a fletching with improved flight performance, and a generous, very forgiving clearance.

Thanks to the generous clearance, a flying/passing arrow with BDF-vanes, will get any deviation in flight reduced - **or fully eliminated** - at cases of interference.

**Arrows with a BDF-fletching will fly safer,
and may help you to win the Gold!**

*PCT pat. SE 2015

Available sizes of BJORN DragonFlight™ vanes:

2 1/4”	2 3/4”	3 1/2”
57mm #225	70mm #275	89mm #350
