

DAMAGE TIMER SYSTEM THE EASY SOLUTION

DAMAGE OF SCANDINAVIA

- the sport's most innovative supplier of target and timer systems

Damage Timer System

The module based system is ideal for both large archery competitions and individual practice.

The Damage Timer System is very popular world-wide, whether it's used in national or international events. However, it is also a sound investment for smaller clubs and individuals. Used in daily practice, it enables swift and synchronized waves of shooting and retrieving arrows, especially when there are many archers training at the same time. The modules can be built to make as small or as large a system as you require.

Extremely user friendly

The same type of cable is used for all connections and the connector is the same at both ends. So it's hard to do anything wrong – anybody can set it up. The cable contains both power and data, and a single cable between the units is all you need.

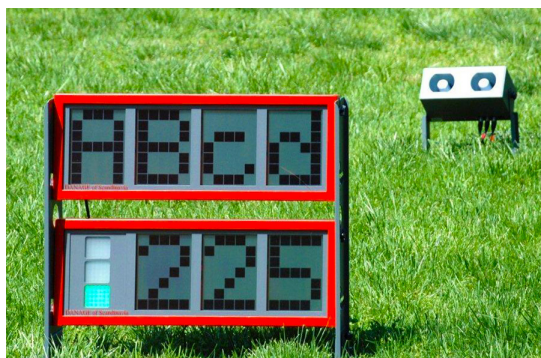

At outdoor events, when power sources may be far off, it can all run on an ordinary car battery. The programmable controller is easy and intuitive to use and the settings can be altered in an instant. Important in the middle of an event, when there is no time to fumble.

The LCD-display is clearly visible in rain or shine, and uses very little power.

- Withstands all kinds of weather
- Intuitive setup and programming
- Ideal for archery events both in- and outdoors
- The system is easily expanded to larger events
- Easy setup
- Also suitable for daily practice, both for individuals and clubs
- Starter set with minidisplay

Controller 13x18 cm

Displays 71x26 cm
